

ALI JALAL

Full-Stack Developer | Frontend Specialist (React) | IT Graduate

Basra, Iraq | alijalal200311@gmail.com | 07771643069 | linkedin.com/in/ali-jalal-336544310 | github.com/gxr21

Core Competencies: React.js | Node.js | MongoDB | JWT Authentication | AES-256 Encryption | REST APIs | Cloud Security | UI/UX Design

PROFESSIONAL SUMMARY

Information Technology graduate (B.Sc., 2026) and Full-Stack Developer with hands-on experience building secure, cloud-based web applications using React, Node.js, and MongoDB. Delivered a production-grade file management platform featuring AES-256 encryption and JWT authentication, validated through OWASP ZAP and Google Lighthouse audits. Combines strong front-end engineering skills with practical exposure to telecommunications infrastructure, biometric systems, and project management, seeking to contribute to innovative startups or enterprise-level technology organizations.

EDUCATION

Bachelor of Information Technology — Administrative Technical College, Basra, Iraq 2026

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, C++, PHP
Frontend Technologies: React, HTML5, CSS3, Bootstrap, Responsive & Accessible UI Design
Backend Technologies: Node.js, Fast API, Flask, PHP (XAMPP Local Environment)
Databases: MongoDB, MongoDB Atlas, Relational Database Design
Cloud & Security: Cloudflare R2 Object Storage, AES-256 Encryption, JWT Authentication
Development Tools: Figma, Git/GitHub, Microsoft Project
Testing & Quality: OWASP ZAP (Security Testing), Google Lighthouse (Performance Auditing)
Additional Skills: MS Office (Word, Excel, Access), SPSS, TCP/IP & OSI Networking Fundamentals, Social Media Marketing (Instagram, Facebook, TikTok), Communication & Interpersonal Skills

PROJECTS

Cloud-Based File Management System — Graduation Project 2026 – 2025

React | Node.js | MongoDB Atlas | Cloudflare R2 | AES-256 | JWT

- Engineered a full-stack cloud file management platform using React, Node.js, and MongoDB Atlas, enabling secure, reliable document storage and retrieval for end users, serving 50+ concurrent users.
- Implemented Cloudflare R2 object storage with AES-256 end-to-end encryption, protecting user files against unauthorized access.
- Designed JWT-based authentication and hardened the application through OWASP ZAP and Google Lighthouse audits, improving performance score by 15% and strengthening resistance to common web vulnerabilities.

Medical Center Website — Front-End Developer Project 2025 – 2024

HTML5 | CSS3 | JavaScript | Responsive Design

- Built responsive, accessible user interfaces across devices, improving usability and overall user experience for site visitors.

Security Package Application — Front-End Developer Project 2024 – 2023

JavaScript | UI Component Design

- Developed secure, reusable UI components, maintaining consistent design language and usability standards across the application.

ATM Banking System — C++ Console Application 2024 – 2023

C++ | Data Structures | Object-Oriented Programming

- Engineered a console-based ATM simulation in C++ applying data structures and OOP principles to manage account creation, editing, and deletion.
- Implemented secure deposit and withdrawal logic, ensuring accurate balance tracking across all transactions.

Student Tracking System — PHP Web Application 2025 – 2024

PHP | XAMPP | CRUD Operations

- Built a full CRUD student management system in PHP, deployed locally via XAMPP, supporting student records and subject enrollment.
- Added teacher management functionality covering assigned subjects and class rosters, streamlining academic administration.

HR Department Digital Transformation — Project Management Initiative

2026 – 2025

Microsoft Project | Process Digitization

- Directed the migration of manual HR workflows to a digital information system, using Microsoft Project for scheduling, task tracking, and resource planning.

Dashboard UI Design — Bootstrap Front-End Project

2024 – 2023

Bootstrap | Responsive Design

- Designed a responsive admin dashboard interface with Bootstrap, improving layout consistency and mobile responsiveness.

Accounting Interfaces — Microsoft Excel Project

2024– 2023

Microsoft Excel | Financial Data Management

- Built structured Excel-based accounting interfaces for financial data entry and tracking, improving data accuracy and reporting efficiency.

INTERNSHIP EXPERIENCE

Telecommunications Trainee — Asia cell Telecom Company

2025

- Explored conceptual workflows of wireless voice and data transmission within a major telecom network serving millions of subscribers.
- Acquired a foundational understanding of mobile network communication, examining tower-to-tower connectivity and cellular technologies (2G, 4G, 5G, and VoLTE).
- Studied the 7 layers of the OSI network model to comprehend end-to-end data transmission workflows, from physical infrastructure up to application-level protocols.

Biometric Systems Trainee — Basra Oil Company

2024

- Gained practical, hands-on experience operating biometric fingerprint devices utilized for daily employee attendance and time-tracking systems.
- Assisted in managing identity-verification workflows and monitored database entry logs for personnel check-ins within the enterprise IT network.
- Managed and monitored biometric systems to ensure accurate attendance and departure records for 30+ employees daily.

CERTIFICATIONS

- Microsoft AI Skills Fest 2026 – Verified Digital Badge (Credly)
- HSE (Health, Safety & Environment) Certificate – Jisr Al-Amal Organization, 7 July 2024
- Telecommunications Certificate – Asia cell, August 2025
- Full-Stack Development Bootcamp – Online Learning Platform, 2023
- User Experience Design – Design Academy, 2024

LANGUAGES

- Arabic – Native
- English – Intermediate (Working Proficiency)
